## Wireless applications that notify you at the first sign of trouble.

You have a lot to think about and manage in your business, and any application that takes some of that load off your shoulders can be well worth the investment. Even better is an application that responds instantly when a problem occurs, leaving you free to use your expertise where it's needed most.

AquilaVision's Offender Transport Tracking and Emergency Response (OTTER) is that kind of application. It monitors your systems and, when it senses any type of problem, it gets the vital information to those who need it most, every time.

OTTER is an emergency notification system unlike most others. Combining some of the latest sensor and monitoring technology with advanced alerting capabilities, this OTTER is smart. It doesn't just detect a problem and sound an alarm—it knows the plan and springs into action instantly, voice calling and text messaging the people who need to know the situation. It works relentlessly until the information has been received and confirmed by everyone on its list.

AquilaVision's OTTER solution has helped many organizations in the public safety, law enforcement, defense, offender, and personal monitoring markets. Its abilities aren't limited to only those industries, however. Any company that needs real-time monitoring and notification can benefit from OTTER.

## The advantages of AquilaVision's OTTER solution.

OTTER monitors your systems and, if a problem arises, will alert the necessary people immediately. It works with your existing sensors and systems and converts data using your own business rules into the type of emergency notifications you need. It's completely customizable to your preferences and can monitor and detect virtually any type of computerized system. It can detect and notify you of system errors, hardware malfunctions, or even predefined events or actions.

It doesn't have to be a matter of life or death. You can use OTTER to monitor people, systems, and databases, and alert you when specified actions occur. You can also use it to notify many people instantly and at the same time.

OTTER can call any device on any network. You can "set it and forget it," turning your time and resources to other matters—with full confidence that, if there's trouble, OTTER will alert those who need to know.

Some real-life examples of what OTTER can do:

An oil refinery has sensors to monitor levels of steam, sulfuric acid, chlorine, and many other factors. OTTER is programmed to notify a hazmat team at the moment any one of dozens of gauges goes too high. Because of the quick, automated response and alerting system, the hazmat team could be on their way before anyone at the site has even noticed a problem.

## THE NETWORK MATTERS.

AquilaVision Corporation applications are available on America's largest and most reliable 3G network: Verizon Wireless.

Military army convoys in the Middle East deliver products and supplies to various strategic locations. Trucks are fitted with panic buttons, monitored around the clock by OTTER, and business rules are predetermined for who is to be notified in the event a button is pressed. If an emergency occurs, air or ground support could potentially arrive much more quickly than if an event was reported over traditional radios.

A stadium manager handles a pool of thousands of part-time employees throughout the year. She uses OTTER to notify preset groups of employees about their schedules for upcoming events. This saves hours of her time spent calling each person individually, and also ensures that the message will get through every time.

#### **AquilaVision OTTER helps organizations:**

- Save money by intelligently handling alerts without human intervention or the need for a call center.
- Make quick, informed decisions with access to near real-time information.
- Respond faster in critical situations.
- Use personnel to focus on more pressing matters with the confidence of knowing that they'll be notified if an emergency occurs.

#### **Services.**

OTTER never sleeps. Day and night, it sorts through your often mundane and tedious streams of data, looking for information that meets preset criteria—such as a glitch in the system or an individual or a vehicle entering a restricted area. When it notices any flagged data, OTTER becomes a virtual call center. It automatically calls the people, departments, or companies that need to know the situation. Depending on your preferences, OTTER can:

- Call any mobile phone, office or home phone, or satellite phone—all at once and immediately.
- Notify up to 19 people with one automated call. Program OTTER for multiple calls and reach hundreds of people without human intervention.
- Call a specified number as many times as you designate, and leave a voice message.
- Continue calling until the user acknowledges receipt.
- Acknowledge a call for help by automatically calling an alternate device.
- Encrypt and store all data from calls for later use in investigations.

**OTTER uses proprietary, patent-pending technology that works with any IP-based notification system or sensor. Its advanced alerting capabilities convert text-based notification data into text messages or voice alerts over the Verizon Wireless network.**

#### **CHOOSE THE BEST NETWORK.**

The application is one part of the equation for helping your business. A widely available, stable wireless network is the other. That's why it makes sense to choose America's largest and most reliable 3G network: Verizon Wireless.

Of course, it also helps that you get:

- Simple online account management.
- Secure data transmission.
- World-class technical support.
- Highly responsive customer support.
- Discounts that increase as your business grows.
